Century has brought a whole new dimension to transport with the 16 Series L.C.G. (Low Center of Gravity) carrier. The patented design lowers the deck height 5 to 6 inches over conventional carriers. The lower height allows for the transport of taller loads such as forklifts or man-lifts that may be over-height on a conventional carrier and provides better stability during transport. The operator may easily secure loads or tie down vehicles while standing on the ground with the lower height. When mounted on most air ride chassis, with the air dumped, the 16 series L.C.G. has less than an 11° load angle, making it ideal for loading low-clearance vehicles or equipment without using ramps or wood. Your new 16 Series L.C.G. is available in deck lengths from 21' to 26' with a capacity of 16,000 lbs. and a wide variety of options to fit your specific transport needs.
